产品隐含碳 MRIO 递归求解算法步骤

设定初始值: $x_{gr}^y = CO_2 e_{gr} / vom_{gr}$

重复以下步骤: i. 估算国际贸易服务隐含碳:

$$x_{j}^{t} = \frac{\sum_{i} x_{jr}^{y} vst_{jr}}{vtw_{j}}$$

ii. 估算双边进口隐含碳:

$$x_{ir}^{m} = \frac{\sum \left(x_{is}^{y}vxmd_{isr} + \sum_{j}x_{j}^{t}vtwr_{jisr}\right)}{vim_{ir}}$$

iii.估算产品隐含碳:

$$x_{gr}^{y} = \frac{CO_{2}e_{gr} + \sum_{i}x_{ir}^{y}vdfm_{igr} + \sum_{i}x_{ir}^{y}vifm_{igr}}{vom_{gr}}$$
